Harness the opportunities provided by the internet to get the most out of your business.

As new innovative technologies allow for increased access to the internet, millions of people worldwide are beginning to go online in search of the services they require. Without a professional web presence you alienate your business from millions of potential clients. Ascend 7 can help you harness the opportunities provided by the internet to get the most out of your business.

Professional Web and Email Hosting

Professional websites need to be hosted on professional web hosting systems and requires significant skills, experience, knowledge and resources to configure and maintain.

Professional email that is branded with your own organisation's name (yourname@ascend7.com.au) is a powerful tool in demonstrating your organisation's credentials and professionalism.

Ascend 7 offers both a wide range of cost effective and efficient web and email hosting services to suit any small or medium enterprise as well as any required ongoing hosting support.

Effective Domain Names

A domain name is a license to use a specific name on the internet for a specific period of time. An example of a domain name is ascend7.com.au.

Registering and using a domain name for your website demonstrates that your business is professional and serious. It supports your brand and makes it easy for customers and potential customers to find you on the web and to communicate with you via email.

Functional Web Design

A website designed by Ascend 7 will have the future in mind, providing a solid foundation for later improvements, changes and development. It will be targeted at your desired audience and the methods your audience will use to interact with it.

Our sites look great but also encourage visitors to take the next step, supporting aims such as customer acquisition, product sales, information transfer and business process automation.

Ascend 7 also offers

- Graphic Design and Branding Services
- Content Management Systems
- Online Marketing
- Hosted Applications
- Online Security
