

Ascend 7 Case Study

Hockey WA Board: A7BIS Board Information System

About Hockey WA

Hockey WA is the governing sporting organisation for field hockey in Western Australia. It is structured with a team of management and employees running the day to day operations, guided by an overarching Board.

The challenge

The Board meets a number of times throughout the year, with members mostly working remotely from the Hockey WA offices. The Board, which does not have direct access to the Hockey WA information systems, needed a way to receive and collaborate with each other about vital information originating from Hockey WA management and staff.

The solution

Ascend 7 implemented a secure and standalone A7BIS Board Information System. The A7BIS system allows Hockey WA management and staff to upload documents for Board attention, without allowing the staff access to any of the Board's discussions, collaboration and decision making processes. The Board members are then free to read, comment, collaborate and make decisions about the information.

The outcome

The Hockey WA Board makes effective use of the various collaborative features of the A7BIS such as contact directories, lists of important and changing information, calendars, discussion boards, and Microsoft Office and email integration. Usage of the site is frequent and Board members can easily access vital documents remotely and in a timely manner, ensuring that they are fully prepared and up to date when formal Board meetings occur.

Contact Ascend 7 for more information on A7BIS
(Board Information System).
